

Individual variation in ONH entry angles across VF locations. Five ocular parameters were evaluated in the optimum AIC model. An "X" indicates that the corresponding parameter was selected as a significant predictor ($P < 0.001$). Mean $\pm$ SD (95% limits) of the ONH entry angles at each VF location, expressed in degrees. The percentage of variation explained by the optimum AIC model is also reported. A total of 70 VF locations met the inclusion criterion for the current study ($R^2 > 0.25$) each with a maximum of 500 intersecting RNFL bundles.

Visual Point	ONHx	ONHy	Axial length	Fovea-ONH Angle	Curvature	Total	Mean [°]	SD [°]	R^2 value
